## Part One: Introduction and Background

## History of the Optometry Admission Test Program

In 1987, the format of the Optometry College Admission Test (OCAT) was changed to include four tests: the Survey of the Natural Sciences (biology, general chemistry, and organic chemistry); Reading Comprehension; Physics; and Quantitative Reasoning. At that time the name of the test was changed to the Optometry Admission Test (OAT ${ }^{T M}$ ).

The Optometry Admission Test (OAT) is administered under the auspices of the Association of Schools and Colleges of Optometry (ASCO) for applicants seeking admission to schools and colleges of optometry. This testing program is designed to measure general academic ability and comprehension of scientific information. While the majority of optometry schools in the United States and Canada require applicants to participate in the OAT Program, test results are only one factor considered in evaluating an applicant's potential.

Validity studies conducted by the testing program have shown that test scores in conjunction with collegiate records are useful in predicting optometry school performance. The relative importance of these predictors in the admission process is determined by each optometry school.

## Content of the Optometry Admission Test

The OAT is a battery consisting of four individual tests: the Survey of the Natural Sciences, Reading Comprehension Test, Physics Test, and Quantitative Reasoning Test.

The Survey of the Natural Sciences is an achievement test covering content from first-year courses in Biology, General Chemistry, and Organic Chemistry. The 90-minute test contains a total of 100 items, including 40 Biology items, 30 General Chemistry items, and 30 Organic Chemistry items. The three subtests are subdivided into several topic areas.

The Reading Comprehension Test consists of three reading passages varying in length from 900 to 1,600 words. Each passage is accompanied by 12 to 20 items which relate to the concepts and ideas developed in the corresponding passage. There are a total of 50 items divided among the three passages. The subject matter of these passages is drawn from aspects of the basic sciences. The time limit for the test is 60 minutes.

The Physics Test is an achievement test covering content from a two-semester physics course. It is a $50-$ minute test containing 40 items.

The Quantitative Reasoning Test measures an examinee's ability to reason with numbers and work intelligently with quantitative materials. This 45-minute test contains 40 items.

Additional content specifications for these four tests are presented in Part Three of this User Guide. Practice test material can be found at https://oat.ada.org/.

## Test Construction

Test construction for the OAT is a complex, multi-step process. Undergraduate faculty specializing in each of these disciplines develop new items for the Survey of the Natural Sciences, Physics, and Quantitative Reasoning Tests. Test Construction Teams (TCTs) specific to each discipline review new items for accuracy and relevance. Items that pass this initial review process are then pre-tested. After pretesting, the appropriate TCT may review item content and performance, and, if necessary, revise the content to meet psychometric standards established for the test. Subject matter experts with backgrounds in science and English language arts develop the topics for new Reading Comprehension Test passages and work to develop the passages and accompanying items. New reading passages undergo the same review and pretesting process as other test items.

TCTs and trained psychometricians select the items to be included on each edition of the test, based on content specifications and various standards of item quality. Item quality is determined by an item's performance when administered to examinees. Two statistics in particular are of chief interest: the difficulty of the item and its discrimination index.

Item difficulty is measured by the percent of individuals who answered the item correctly. The difficulty level of the item is thus inversely related to the percentage of examinees who answer the item correctly. As the percentage of examinees who answer the item correctly increases, the difficulty of the item decreases. The recommended item-difficulty level for OAT items ranges from 40 percent to 89 percent.

The discrimination index is a point-biserial correlation coefficient, where the coefficient associated with an item represents the correlation between scores on that item and the total score on that particular test. A low correlation coefficient, such as 0.01 , would indicate the average test score of individuals who answered the item correctly was roughly the same as the average score of individuals who answered the item incorrectly. In this case, item performance would be unrelated to overall test performance, thus indicating that the item does not discriminate and should therefore be discarded. A higher correlation coefficient, such as .45 , would indicate the item is effective at discriminating between high scoring and low scoring examinees. Items with higher discrimination index values are more useful in determining a rank order of examinees according to the ability being measured. OAT items with insufficient discrimination indices are either revised or discarded.

## Interpreting OAT Scores

Each test in the OAT battery yields a raw score, which is the sum of an examinee's correct answers. The raw score is converted to a scale score which can range from 200 to 400 . Using scale scores it is possible to compare the performance of examinees who attempted different editions of the examination.

In addition to the scale scores provided for each test, scale scores are also reported to represent overall performance across the science tests, and overall performance in academic areas appearing on the OAT. The total science score is based on the raw scores for the 100 items from the Survey of the Natural Sciences - including Biology, General Chemistry, and Organic Chemistry - and the 40 Physics items. The academic average is a composite score computed from the mean of the Quantitative Reasoning, Reading Comprehension, Biology, General Chemistry, Organic Chemistry, and Physics standard scores. If an examinee does not
take a section of the test, they would receive a raw score of zero and a standard score of 200 on that section.

Ideally, the mean score for each test on the OAT would always be exactly 300, assuming a comparably skilled set of examinees is completing the test. However, in any testing program, some variation in scores is inevitable; therefore the amount of drift from the ideal mean of 300 is constantly monitored. The OAT Program provides frequency tables for each OAT subtest regularly. This information provides guidance in interpreting the scores and insight into any drift from the expected mean score of 300 . For example, in the frequency tables for 2022, the mean scores were 302 for Biology, 302 for General Chemistry, 295 for Organic Chemistry, 327 for Reading Comprehension, 318 for Quantitative Reasoning, and 282 for Physics.

As part of the ongoing validation process for the OAT, ASCO requested the OAT scale be recalibrated so the mean scale score would return to 300 with a standard deviation of 40 . The data for this recalibration study was based on a "reference group" of examinees taking the OAT for the first time in 2008. The rescaling for each subtest on the OAT was accomplished through the use of the Rasch model, which takes both examinee ability and item difficulty into account. The score scales for all OAT subtests were recalibrated and the new scale score of 300 took effect May 1, 2009.

The new scale had the following major implications for OAT scores:

- Scores obtained under the new and old scales were not directly comparable. A score of 300 on the old scale, for example, does not have the same conceptual meaning as a score of 300 on the new scale.
- When reviewing examinees' scores, the date the test was taken and differences in the scale should be considered.
- The recalibration did not change the OAT's difficulty. Scores achieved after May 1, 2009 might be somewhat lower than those achieved prior to the recalibration date because the mean score was set back to be as close as possible to 300 . This does not indicate a change in test takers' skill levels.
- $\quad$ Scores achieved prior to May 2009 can be compared with other scores from within that time period, and scores achieved after May 2009 are comparable with other scores from the same period. However, scores from different time periods (e.g., scores from May 2008 vs. scores from May 2010) are not considered directly comparable.
- For example, an examinee who tests in May 2009 and December 2009 will be scored on the same score scale, and the two sets of scores can be directly compared.
- The scores of an examinee who tested in January 2009 and retested in July 2009 should not be directly compared, because the test's scale scores were different in the two time periods.
- When comparing scores involving two or more examinees, take care to determine whether the scores are from a comparable period.

Information on the details of this change was distributed to all optometry schools, pre-health education advisors, and potential examinees in March of 2009. Frequency distributions, or
percentile equivalents of scale scores, for the new OAT subtest scales were generated, and the means and standard deviations for the scale scores were computed.

## Evaluation of the Optometry Admission Test Program

When considering an examination's effectiveness, two basic psychometric aspects of testsreliability and validity must be considered.

Reliability is the precision or consistency of the assessment. For the OAT Program, a measure of internal consistency reliability, KR-20, is calculated for each scale (with the exception of the Academic Average for which a composite reliability estimate is determined). Table 1 lists reliability estimates based on administrations of the OAT occurring in 2022.

To ensure the OAT is capable of fulfilling its purpose, it is essential to understand the content and predictive validity evidence available for each section of the test. For the OAT, Test Construction Team members provide support for content validity. These individuals are experts in the subject areas corresponding to their team. For the Reading Comprehension Test, published writers typically possessing a minimum of a master's degree in English language arts or the sciences and educational writing experience produce the passages.

Predictive validity is assessed by examining correlations among OAT scores and students' grades in their first and second years of optometry school. The predictive power of the OAT varies from school to school and from one OAT section to another. The OAT Validity Study report provides detailed information on this topic, and is available at ADA.org/OAT. Validity is also addressed in the article, Validity of the Optometry Admission Test in Predicting Performance in Schools and Colleges of Optometry (Kramer \& Johnston, 1997).

## Introduction to the Tables

The tables in this report describe performance on the OAT by gender (Tables 2-9), ethnic identification (Tables 10-17), and Hispanic origin (Table 18).

The data in the tables is based on examinees who answered the questions on gender and ethnic identification. Not all examinees chose to answer these demographic questions. The total count for each table varies because some examinees chose not to answer the questions, but the percentages will add up to $100 \%$ because the data is based solely on respondents. The columns for gender, ethnicity, Hispanic origin, total percentage, and total count can be added vertically. The statistics in the tables in this User Guide were based on all participating examinees.

The OAT Program publishes an OAT Candidate Guide each year with information about the testing policies, procedures, and eligibility requirements for the calendar year. For additional information concerning the requirements that were applicable to the tested group, please consult the OAT Candidate Guide which is available at ADA.org/OAT.

# Part Three: Content Specifications 

## Survey of Natural Sciences: Biology <br> (January 1 - April 14, 2022)

## 40 items

1.1 Cell and Molecular Biology
1.1.1 $\quad$ Origin of Life1.1.2 Cell metabolism (includingphotosynthesis / enzymology)
1.1.3 Cellular processes
1.1.4 Thermodynamics
1.1.5 Organelle structure and function
1.1.6 Mitosis/ Meiosis
1.1.7 Cell structure and function
1.1.8 Experimental cell biology
1.1.9 Biomolecules

### 1.3 Structure and Function of Systems

1.3.1 Integumentary
1.3.2 Skeletal
1.3.3 Muscular
1.3.4 Circulatory
1.3.5 Immunological
1.3.6 Digestive
1.3.7 Respiratory
1.3.8 Urinary
1.3.9 Nervous/senses
1.3.10 Endocrine
1.3.11 Reproductive
1.3.12 Relationships
1.4 Developmental Biology
1.4.1 Fertilization
1.4.2 Descriptive embryology
1.4.3 Developmental mechanisms
1.5 Genetics
1.5.1 Molecular genetics
1.5.2 Human genetics
1.5.3 Classical genetics
1.5.4 Chromosomal genetics
1.5.5 Genetic technology
1.6 Evolution, Ecology, and Behavior
1.6.1 Natural selection
1.6.2 Population genetics/Speciation
1.6.3 Population and community ecology
1.6.4 Ecosystems

# Survey of Natural Sciences: Biology (April 15 - December 31, 2022) 

## 40 items

### 1.1 Cell and Molecular Biology

1.1.1 Cell metabolism
1.1.2 Cellular processes
1.1.3 Thermodynamics
1.1.4 Mitosis/meiosis
1.1.5 Cell and organelle structure and function
1.1.6 Experimental cell biology
1.1.7 Biomolecules
1.1.8 Integrated relationships
1.2 Diversity of Life
1.2.1 Viruses
1.2.2 Archaebacteria
1.2.3 Eubacteria
1.2.4 Fungi
1.2.5 Protista
1.2.6 Plantae
1.2.7 Animalia
1.2.8 Integrated relationships
1.3 Structure and Function of Systems
1.3.1 Integumentary
1.3.2 Skeletal
1.3.3 Muscular
1.3.4 Circulatory
1.3.5 Lymphatic/immune
1.3.6 Digestive
1.3.7 Respiratory
1.3.8 Urinary
1.3.9 Nervous/sensory
1.3.10 Endocrine
1.3.11 Reproductive
1.3.12 Integrated relationships

### 1.4 Genetics

1.4.1 Molecular genetics
1.4.2 Human genetics
1.4.3 Classical genetics
1.4.4 Chromosomal genetics
1.4.5 Genetic technology
1.4.6 Developmental mechanisms
1.4.7 Genomics
1.4.8 Gene expression
1.4.9 Epigenetics
1.4.10 Integrated relationships
1.5 Evolution and Ecology
1.5.1 Natural selection
1.5.2 Population genetics/speciation
1.5.3 Animal behavior
1.5.4 Ecology
1.5.5 Integrated relationships

## Survey of Natural Sciences: General Chemistry

30 items

1. Stoichiometry and General Concepts
A. Percent composition
B. Empirical formulae
C. Balancing equations
D. Moles and molecular formulas
E. Molar mass
F. Density
G. Calculations from balanced equations
2. Gases
A. Kinetic molecular theory of gases
B. Dalton's gas law
C. Boyle's gas law
D. Charles's gas law
E. Ideal gas law
3. Liquids and Solids
A. Intermolecular forces
B. Phase changes
C. Vapor pressure
D. Structures
E. Polarity
F. Properties
4. Solutions
A. Polarity
B. Properties
5. Colligative
6. Non-colligative
C. Forces
D. Concentration calculations

## 5. Acids and Bases

A. pH
B. Strength
C. Brønsted-Lowry reactions
D. Calculations
6. Chemical Equilibria
A. Molecular
B. Acid/base
C. Precipitation
D. Calculations
E. Le Chatelier's principle
7. Thermodynamics and Thermochemistry
A. Laws of thermodynamics
B. Hess's law
C. Spontaneity
D. Enthalpies and entropies
E. Heat transfer
8. Chemical Kinetics
A. Rate laws
B. Activation energy
C. Half-life
9. Oxidation-Reduction Reactions
A. Balancing equations
B. Determination of oxidation numbers
C. Electrochemical calculations
D. Electrochemical concepts and terminology
10. Atomic and Molecular Structure
A. Electron configuration
B. Orbital types
C. Lewis-Dot diagrams
D. Atomic theory
E. Quantum theory
F. Molecular geometry
G. Bond types
H. Sub-atomic particles

## 11. Periodic Properties

A. Representative elements
B. Transition elements
C. Periodic trends
D. Descriptive chemistry
12. Nuclear Reactions
A. Balancing equations
B. Binding energy
C. Decay processes
D. Particles
E. Terminology
13. Laboratory
A. Basic techniques
B. Equipment
C. Error analysis
D. Safety
E. Data analysis

## Survey of Natural Sciences: Organic Chemistry

## 30 items

1. Mechanisms: Energetics and Structure
A. Elimination
B. Addition
C. Free radical
D. Substitution mechanisms
E. Other
2. Chemical and Physical Properties of Molecules
A. B. Aromatic
3. General
4. One-step
5. Multi-step
B. C. Substitution/Elimination
6. General
7. One-step
8. Multi-step
C. D. Aldehyde/Ketone
9. General
10. One-step
11. Multi-step
12. ${ }^{13} \mathrm{C}$ NMR
13. Infrared
14. General
15. One-step
16. Multi-step
B. Structure
17. Polarity
18. Intermolecular forces (solubility, melting/boiling point, etc.)
C. Laboratory Theory and Techniques
(i.e. TLC, separations, etc.)
19. General
20. One-step
21. Multi-step
22. Stereochemistry (Structure Evaluation)
A. Chirality
23. Acid-Base Chemistry
B. Isomer relationships
C. Conformations
A. A. Ranking Acidity/Basicity
B. 1. Structure Analysis
24. $\mathrm{pH} / \mathrm{pKa}$ data analysis
C. B. Prediction of products and equilibria
25. Nomenclature
A. IUPAC rules
B. Functional groups in molecules
26. Individual Reactions of the Major Functional Groups and Combinations of Reactions to Synthesize Compounds
A. Alkene/Alkyne
27. General
28. One-step
29. Multi-step

## Reading Comprehension

The Reading Comprehension Test contains three science-based reading passages and requires no prior knowledge of the topics covered other than basic undergraduate preparation in science. The test measures the ability to comprehend, organize, analyze, and remember the information presented.

Each reading passage is $900-1,600$ words in length and is followed by $12-20$ items, which can be answered from a reading of the passage. The total number of items for all three passages is 50 .

## Physics

## 40 items

1. Units and Vectors
2. Linear Kinematics
3. Statics
4. Dynamics
5. Rotational Motion
6. Energy and Momentum
7. Simple Harmonic Motion
8. Waves
9. Fluid Statics
10. Thermodynamics and Thermal Energy
11. Electrostatics
12. D.C. Circuits
13. Optics

## Quantitative Reasoning

## 40 Items

## 1. Mathematical Problems

1.1 Algebra
1.1.1 Equations and expressions
1.1.2 Inequalities
1.1.3. Exponential notation
1.1.4. Absolute value
1.1.5. Ratios and proportions
1.1.6. Graphical analysis
1.2 Data Analysis
1.3 Interpretation and Sufficiency
1.4 Quantitative Comparison
1.5 Probability and Statistics
2. Applied Mathematics (Word) Problems

Optometry Admission Test Program Department of Testing Services 211 East Chicago Avenue
Chicago, Illinois 60611-2637

February 2023
